

Director of Estimating
George J. Elles

As Director of Estimating, George Elles manages Correct Electric's estimating department with a system of checks and balances designed to reduce variations in the estimating and bidding process to less than 5%. With over 30 years of experience in the electrical contracting industry, Mr. Elles is well versed in the critical stages of project estimating, planning, and design. Throughout his career, George has served in a variety of managerial positions including chief and conceptual estimator, project manager, and designer.

Prior to joining the Correct Electric team in 2006, Mr. Elles owned Electrical Construction Services, a consulting business he started in 2000 which focused on assisting electrical contractors in excelling in planning, pre-fabrication, and project performance. During this time, Mr. Elles also negotiated nationwide data center electrical contracts for a Houston based design/build firm, taking each project from the conceptual and estimating phases through project completion as the project manager. Projects ranged from 20,000 to 99,000 square feet and 2 million to 8 million dollars each. Through Mr. Elles' careful management, each of these projects was completed on-time and within budget.

From 1990 to 1996, George served as Senior Vice President in charge of estimating and design/build projects at Pollock Electric in Houston, Texas. George was named President of Pollock Electric in 1997. In 1998, he moved to Pollock's parent company, Integrated Electrical Services, to open their National Accounts Division.

During his tenure with Pollock Electric, Mr. Elles served on the Board of Directors of the Houston IEC Chapter for five years, of which he served three consecutive terms as President of the Board from 1995 to 1997. The Houston IEC Chapter was awarded National Chapter of the Year each of the three years in which Mr. Elles served as President of the Chapter.
